PyrOptix IR-Core3 Upgrade Program Enhanced performance for your PyrOptix camera system

You can now gain even greater results from your PyrOptix™ infrared inspection camera. Featuring the latest core technology, the PyrOptix IR-Core3 Upgrade Program is an easy way to achieve the most advanced online visibility and temperature analysis without incurring the costs of replacing your existing equipment. We're offering this new core as a proactive way to help our customers enjoy best-in-class performance. While upgrading your camera is not essential, we do recommend it for cameras that have been in the field two years or longer.

Taking advantage of our core upgrade brings you the following important benefits:

ENHANCED IMAGES

Our new detection core materials deliver improved pixel uniformity resulting in crisper images.

FEWER COMPONENTS AND GREATER DURABILITY

Our new integrated core technology does not need a chopper motor moving assembly. With fewer internal moving parts, your camera is more durable and has a lower likelihood of needing maintenance.

IMPROVED POWER PERFORMANCE

By upgrading your camera's core, you'll increase your battery life and use less power to perform the same functions. With longer camera operation between charging, performance is extended over 60%—from a typical 3 hours of use to 5 hours or more.

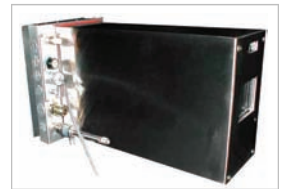

BETTER FIELD OF VIEW MODIFICATION

With the new core, the lens adapter is shortened by 1/2" allowing you to increment finer fields of view without having to change the optics of the lens assembly.

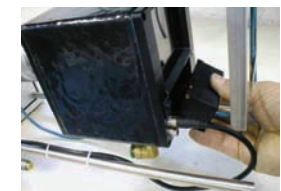

The PyrOptix IR-Core3 Upgrade is available for the following PyrOptix cameras:

PyrOptix Mobile

PyrOptix Fixed Mount

PyrOptix Dual Use

How the PyrOptix IR-Core3 Upgrade Program works:

- 1 We arrange shipment of your current camera to our dedicated service facility. The upgrade process is fast, but we're glad to provide a loaner camera for uninterrupted performance.
- 2 We refurbish your camera with the new core and ship the camera back for easy replacement into your system. There's no modification to your other field equipment.

Contact Enertechnix to get started.

If you'd like to take advantage of our IR-Core3 Upgrade Program, call us at (425) 432-1589 to learn more.

About Enertechnix

Enertechnix develops and commercializes innovative technologies for process and environmental monitoring to improve the efficiency, cleanliness and safety of large-scale energy conversion processes.
